Acuma - Haul

About Us

Valle Bros Mfg is located in the heart of the beautiful Willamette Valley of Oregon. We are a family owned and operated manufacturing company that builds hay handling equipment. Our goal as a company is to provide you with quality built equipment that will last you a lifetime and make your operation more efficient. We take great pride in our Fabrication and Manufacturing capabilities. Our unique line of farming equipment offers our clients time and money saving versatility.

Save Time & Money

Our bale moves are proven to save you time and money by limiting your labor and fuel costs: this machine makes it a one man operation from gathering the bales in the field to putting them in rows in your stack lot, by getting your rows of bales in a straight and tight row the first time and you'll never have to double handle them again.

How It Works

Our equipment handles each bale gently and efficiently with the design of the loading arm, main frame, and the chain and paddle system as the bales are loaded they slide on the pipe on the inside of the frame rails this way the bales will never come in contact with the chain so you'll never tear your net wrap. We use walking beam suspension. To unload the bales the axle system rotates forward this allows the back of the frame to lower to the ground, then by putting your pickup or tractor in neutral, and pushing the bales off with the paddle will create a tight row in your stack lot or an efficient way to unload if you're stacking in a barn.

Our equipment is built with quality and will last you for years to come we offer different options from a gooseneck model that you can tow behind a pickup to your regular bumper pull model for your tractor.

Models

ACUMA-HAUL 900

Model will handle 7-5' and 9-4'

ACUMA-HAUL 800

Model will handle 6-5' and 8-4'

Pickup Model

The gooseneck model comes with its own power unit to operate the machine the power unit consists of a 21 horse Briggs and Stratton motor and a 20gal reservoir it also comes with a hydraulic manifold and a wireless hand held control.

Tractor Model

The tractor model comes with several different options:

- 1 A hydraulic tongue
- 2 A manifold that comes with a wireless handheld control to operate the machine with.
